

EASY-CARE

Grass Seed Blend

EASY-CARE grass seed blend is the scientific result of the test trials made in your geographic area along with input from professionals who will settle for nothing less than convenience and excellence!

Characteristics:

- Low Maintenance
- Disease Resistant
- Deep rooted
- Sun & Shade tolerant
- Durable

Mowing:

The recommended mowing height is 1 ½" to 2 ½". There is a direct correlation between root growth and top growth. The higher it is mowed, the deeper the roots, thus more water and nutrients available to the plant. It is recommended to mow within 3 weeks after planting.

Thatching/Aerification:

Thatching this product would be hazardous due to the fact that it doesn't creep. A bi-yearly aerification program would be helpful to aid in water penetration.

Uses:

This product can be used on athletic fields, school yards, home lawns, commercial projects, roadside erosion control, golf course rough areas, etc.

Watering Established Lawn:

Water longer and less frequently once lawn is established.
