

BeefMaster® Pro | Get Plus®

Cattle Forage Mixture with Beneficial Endophytes

- Extremely Persistent
- Beneficial Endophyte
- Highly Palatable

Key features

- All varieties specifically selected for drought resistance
- Rapid establishment and persistence
- Exceptional yields and late maturing - maintains quality
- High dry matter intake-rapid weight gains
- White clover provides protein and soil nitrogen

Seeding Rate

Seeding rate:	25-30 lbs/acre
No-till seeding rate:	30 lbs/acre
Broadcast seeding rate:	35-40 lbs/acre

Get Plus®

After many years of research, we were able to incorporate two beneficial endophytes into our premium forage products. These endophytes are safe, sustainable, and profitable.

A formulation of forage grasses and white clover that includes two modern grasses from our Get Plus® technology: BarOptima® E34® powered by Get Plus® and Remington NEA2 powered by Get Plus®.

Along with the added value of the beneficial endophytes, BeefMaster® Pro powered by Get Plus® is a late maturing, winter hardy variety that maintains its productivity even under close grazing. The white clover allows for extra gains and benefits the stand by fixing nitrogen. This blend delivers highly productive, high energy forages, enabling rapid weight gains.

Technical Information

Uses

BeefMaster® Pro | Get Plus® is ideal as a pasture mixture for stocker cattle, cows, and calves. In addition, its dry matter production and quality make it suitable for haylage, baleage and hay production. BeefMaster® Pro | Get Plus® is also an excellent product to overseed an existing stand.

Establishment

In moderate climates or hot, dry areas, BeefMaster® Pro | Get Plus® can be planted in spring or early fall. In regions prone to summer drought, fall sowing is recommended. To ensure good establishment, a balanced fertilizer such as 100 lbs/acre of 20-20-20 (N-P-K) should be applied at planting. BeefMaster® Pro | Get Plus® can be established via full tillage, no-till, or broadcast seeding methods. A well-prepared firm seedbed is ideal for planting BeefMaster® Pro | Get Plus®. Maintain a planting depth of 1/8 to ¼ inch. BeefMaster® Pro | Get Plus® can also be seeded via no-till drill to improve an existing pasture.

Management

A rotational grazing system is recommended. Proper grazing will increase pasture productivity as plants will develop deeper root systems and recover more quickly after grazing resulting in more yield. Appropriate fertility is also recommended.
